

Maritime Training Package

Continuous Improvement Plan 2015

The Training Package development and endorsement process requires Training Packages to undergo a continuous improvement process to ensure the existing and emerging skill needs of industry are met.

The currently endorsed versions of the Maritime Training Package is MAR Release 3.0 and MAR13 Release 1.0.

This Continuous Improvement Plan (CIP) provides an outline of the changes planned for the endorsed components of the MAR and MAR13 Training Package over 2011 – 2015. Information on items that have already been completed is available in the Maritime Training Package Continuous Improvement Plan – Completed Items Summary.

Information is drawn from a variety of intelligence sources, including: the Environmental Scan, Have Your Say Register, and ongoing consultation and engagement with industry stakeholders. The CIP is also impacted by national policy directives in relation to Training Package design, development and endorsement.

Quarterly updates are made to the CIP in February, May, August and November, and released on the website tlisc.org.au. Interim updates may also be released if significant developments occur.

For further information regarding this CIP please contact:
